◆ ACTIVE SOAP ◆

Ingredients:
100% vegetable oils.

Precautions for use:
Store in a cool, dry place.

Kevin Bacon's Active Soap is the immediate solution for all problems of itchy skin, manes and tails.

Kevin Bacon's Active Soap combats all the problems of itching caused by culicoides (biting midges or 'no-see-ums'), horseflies, houseflies, mange (microscopic mites), Tinea or 'ringworm' infections (very contagious fungi), strongyles (larvae that infest the intestines), and cattle grubs (larvae from the large flies known as warble, heel, or gad flies). Kevin Bacon's Active Soap is a simple remedy that is fast, efficient, natural, and non-toxic for our friend.

Kevin Bacon's Active Soap is made only from 100% cold-pressed vegetable oils. The essential oils and many other natural ingredients used to make the soap are of the highest quality and used by humans. Due to the cold fabrication process, glycerine - a naturally present moisturizing element - is conserved.

The colour and texture of Kevin Bacon's Active Soap are obtained through the exclusive use of clays, herbs, petals, leaves, spices, and so on. The bars of soap are dried during 4 to 6 weeks.

Kevin Bacon's Active Soap does not contain any chemical preservatives.

Packaging: 100 gm.
12 bars per case

Recommendations for use :

Wet your horse and apply Kevin Bacon's Active Soap thoroughly to the horse's skin. Let it soak in for 20 minutes, and then rinse. If the problem is more severe, let dry without rinsing. Kevin Bacon's Active Soap can also be used on human skin.
