# The very best in horse care

•HOOF SOLUTION• •HOOF DRESSING• •LIQUID HOOF DRESSING• •HOOF FORMULA•

## •HOOF FORMULA•

### Analytical constituents and % composition (per kg):

• Crude protein :	30%
• Crude ash :	16%
• Crude fibre :	6%
• Calcium :	4%
• Crude fat :	2%
• KCl :	1.75%
• Phosphorus :	0.65%
• Sodium :	0.26%

### Raw materials :

- Soybean meal.
- Brewery yeast (probiotic).
- Methyl sulphonyl methane (MSM).
- Magnesium sulfate monohydrate.

### Additives :

#### Technological additives (preservatives) :

• E280 (propionic acid) :	0.4 g/kg
---------------------------	----------

#### Nutritional additives :

• E672 (Vitamin A) :	1 000 000 IU/kg
• Biotin :	500 mg/kg

### Categories of ingredients :

Oils product and by-products, grain products and by-products, and minerals.

Manufactured 1 year before indicated expiry date.

Store in a dry place.

### Packaging : 5 kg.

Available by the tub or pallet of 56 tubs.

Kevin Bacon's Hoof Formula is a very palatable feed supplement with high nutritional value for horses and ponies.

Kevin Bacon's Hoof Formula is a complete feed supplement made of dense pellets containing all the nutrients a horse or a pony needs for its health and well-being.

**Kevin Bacon's Hoof Formula** is recommended as a daily basic supplement for growing stock and sport horses, but also for convalescent and elderly horses. Its high-quality proteins and amino acids supply all the elements needed for the development and maintenance of muscles, tendons, hooves, and all tissues. Its formula also contains natural yeast, which several studies have shown to be effective in improving the digestive capacity of equines.

**Kevin Bacon's Hoof Formula** compensates for the lack of basic nutrients (grain, green fodder, etc.) in a reliable, ideal way.

It also provides a balanced nutrient supply :

**Foals (from 7 months until 3 years) :** for harmonious general development, especially that of the skeleton and musculoskeletal system.

**Pleasure and sport horses :** in case of great effort during training and competition.

**Breeding stock :** breeding and lactating mares, as well as stallions during the breeding season.

**Convalescent horses :** for optimal recovery.

**Resting elderly horses :** to compensate for lack of appetite.

### Directions for use

#### Recommended daily dosis:

Per 100 kg of body weight : 1/4 measure (40 gm)

Foals (6 to 18 months) : 1/4 measure (40 gm)

Ponies : 1/2 measure (80 gm)

Horses : 1 measure (160 gm)

Made to GMP and HACCP standards.

Does not contain any prohibited substances.

Tested and approved by FASFC  
(Federal Food Safety Agency)
